CANDEUR

White coco

Varietal profile

Type : WHITE COCO

Registered : France 2020

TWK : 580 g to 620 g

Plant height: Medium

First pod height: Low

Color seed: White

Grain shape: Oval

Flowering: Early

Lodging: Not sensitive

Seeding dates: May 1st to May 30th

The essentials

Very good potential yield

- Early crop cycle.
- Grouped flowering for a harvest at maturity.

Very good stem hold

- Not very sensitive to lodging.

Food qualities

- Excellent baking properties.
- High in protein.

Recommandation

Plot selection

- Avoid hydromorphic soils : crop sensitive to excess water and root asphyxiation.
- Avoid acidic and sandy soils.
- Prefer well exposed and drained soils, of clayey-limestone type, even superficial.

Implementation

- Soils with a pH above 7 facilitate the establishment of nodules.
- Deep tillage is recommended to facilitate the implantation of nodules.

Seeding

Sowing with a precision planter is recommended

- **Row spacing:** 30 to 60 cm
- **Seedind density:** 25 to 35 seeds/m²
